Subject: SBC-4: Public Review comments

Dear Sirs:

The following difficulties have been found in:  
eb-2020-00268-Public-Review-Register-INCITS-506-202x-Comments-Due-08-25-2020

**On PDF page 277 – Page number 196 ...**

The third paragraph below table 109 reads:

c)

There is no other text on this line.

This line should be deleted in its entirety.

Two paragraphs below the content-free line described above, there is a multi-level unordered list that ends with "... by a sanitize cryptographic erase operation; and"

To all readable appearances, there is no text provided to complete the unordered list, however ...

Although the next paragraph appears to begin with the following text, this text is part of the unordered list.

perform the equivalent of a FINISH ZONE command (see ZBC-2) with the ALL bit set to one for any write pointer zone that is sanitized by a sanitize overwrite operation or a sanitize block erase operation.

This text should be the B) entry in the unordered list."

N.B. The sentence that reads, "For a logical unit that is not a zoned block device the ZNR bit shall be ignored." is the total content of the paragraph that is expected to follow the unordered list.

**On PDF page 379 – Page number 348 – in Table 271 ...**

Ignoring blank table cells and ellipses, the left-most column in the rows below the row that contains "Format preset descriptors list" should be (in top-to-bottom row order):

- 4
- 67
- n-63
- n

Thank you for considering these concerns.  
.Ralph
