

# **Project Proposal for a new INCITS Standard**

## **Fibre Channel - Framing and Signaling - 4 (FC-FS-4)**

### **T11/11-116v1**

#### **1 Source of Proposed Project**

##### **1.1 Title**

Fibre Channel - Framing and Signaling - 4.

##### **1.2 Date Submitted**

March 17, 2011.

##### **1.3 Proposer(s)**

INCITS Technical Committee T11.

#### **2 Process Description for the Proposed Project**

##### **2.1 Project Type (Development or Revision)**

Type D (Development done within INCITS TC T11).

##### **2.2 Type of Document**

Standard.

##### **2.3 Definition of Concepts and Special Terms**

None.

##### **2.4 Expected Relationship with Approved Reference Models, Frameworks, Architectures, etc.**

All Fibre Channel standards are intended for use in closed systems.

##### **2.5 Recommended INCITS Development Technical Committee**

It is recommended that this project be assigned to TC T11, in order that the project be coordinated with work on other Fibre Channel standards.

## **2.6 Anticipated Frequency and Duration of Meetings**

This project will make use of the regularly-scheduled bimonthly T11 plenary meetings. Informal Working Groups will be organized on an ad-hoc basis to discuss specific subjects where appropriate.

## **2.7 Target Date for Initial Public Review (Milestone 4)**

June 2013

## **2.8 Estimated Useful Life of Standard or Technical Report**

It is anticipated that this standard will have a useful life of over 10 years.

# **3 Business Case for Developing the Proposed Standard or Technical Report**

## **3.1 Description**

This project proposal recommends the development of a set of technical additions and clarifications to INCITS T11/Project 1861-D, Fibre Channel - Framing and Signaling - 3 (FC-FS-3).

Included within this scope are:

- a) Clarifications of existing ambiguities;
- b) Any items deemed necessary to support energy efficient Fibre Channel; and
- c) Any other item as deemed necessary during the development.

## **3.2 Existing Practice and the Need for a Standard**

As Fibre channel evolves with changes to speed, new upper level protocols, and new functions, FC-FS-4 is needed to describe any changes needed to Fibre Channel Framing and Signaling. FC-FS-4 will be a highly compatible extension to FC-FS-3. FC-FS-4 will be an entire standard and not a delta from FC-FS-3.

The project (i.e., FC-FS-4) may also involve the deletion or obsoleting of outdated functions and features of FC-FS-3, support of new functions defined by the FC family of documents, the inclusion of improvements and clarifications to the definitions of existing services as dictated by experience with existing implementations, and other capabilities which will improve the performance of existing FC products and fit those products for new applications.

## **3.3 Implementation Impacts of the Proposed Standard**

### **3.3.1 Development Costs**

This standard will be developed through the voluntary and cooperative efforts of T11 Task Committee members. No significant development costs are anticipated.

### **3.3.2 Impact on Existing or Potential Markets**

The proposed standard will provide an upward growth path that complements and enhances existing supplier products and support schemes. The proposed standard will result in expanded applications for existing and conceived products in both the channel and network markets. It is likely that isolated adverse effects would occur in any case through non-standard evolution or revolution.

### **3.3.3 Costs and Methods for Conformity Assessment**

The committee will consider the results of testing provided to the committee through the voluntary efforts of the

participants in T11. With this method all costs are borne by the organizations of the various participants and have for the most part been mainly an adjunct of their normal development costs.

### 3.3.4 Return on Investment

The return on investment for this development is expected to be high, due to the commonality of effort directed to a singular method of providing the services covered by the proposed standard. Additionally, the investment made in products developed under FC-FS-4 will be preserved by providing services within the existing infrastructure.

## 3.4 Legal Considerations

### 3.4.1 Patent Assertions

Calls will be made to identify assertions of patent rights in accordance with the relevant INCITS, ANSI and ISO/IEC policies and procedures. T11 is aware of patent assertions that have been made and letters indicating compliance with INCITS policies have been received.

### 3.4.2 Dissemination of the Standard or Technical Report

Drafts of this document will be disseminated electronically. Dissemination of the final standard will be restricted as the document becomes the property of INCITS, ANSI, or ISO/IEC.

## 4 Related Standards Activities

### 4.1 Existing Standards

ID Number	Title
